

ACVATIX™

Electromotoric actuators

SQL321B..
SQL361B..

For VKF42.. butterfly valves

-
- SQL321B.. Operating voltage AC 220 V, 2-position (SPDT) control signal
 - SQL361B.. Operating voltage AC 220 V, DC 0...10 V control signal
 - Optional 1000 Ω potentiometer and auxiliary switch
 - Nominal angle of rotation 90°
 - Handwheel and position indicator
 - Built-in heating element to avoid condensation
 - Compatible with EN ISO 5211 flanges

Use

For operation of VKF42.. butterfly valves as shutoff and control valves in heating, ventilation and air conditioning plants.

Type summary

Product No.	Stock No.	Operating Voltage	Positioning Signal	Position Feed-back Signal	Positioning Time for 90° at 50 Hz [s]	Nominal Torque [Nm]	Flange Connection EN ISO 5211

Ordering

The actuator, butterfly valve and any accessories must be ordered separately.
When ordering, please specify the quantity, product name and product number.

Example

Product No.	Stock No.	Description	Quantity
SQL361B150	S55164-A104	Electromotoric actuator	1
ASC10.21	S55845-Z122	Double auxiliary switch	1

Delivery

The actuator, accessory and butterfly valve are packed separately and delivered as individual items.

Rev. No.

Please see chapter "Rev. No" on page 12.

Equipment combinations

¹⁾ SQL321B..., SQL361B... electromotoric actuators can be mounted directly on VKF42.. butterfly valves.

Δp_s Maximum permissible differential pressure at which the motorized butterfly valve will close securely against the pressure (close off pressure)

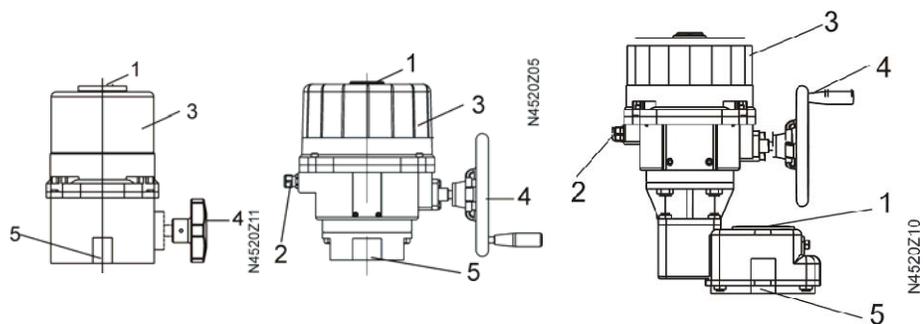

Mechanical design

The actuator is driven by a 2-position (SPDT) or DC 0...10 V control signal from the controller and generates a rotary motion which is transferred to the butterfly valve via a driver.

These electromotoric actuators require no maintenance. They have a reversible asynchronous motor which drives the main shaft via gear train, which accommodates the diagonal square head of the butterfly valve. For SQL321B25, the coil spring is fitted with handwheel shaft, handwheel is engaged when pushed in. For others, the worm shaft is fitted with a direct-acting handwheel.

The actuators are 90° rotated so as to work with Siemens VKF42.. butterfly valves. During automatic operation, rotation is stopped by two built-in end-switches.

To prevent the temperature inside the housing from falling below the dew point temperature, the actuators are equipped with a built-in heating element.

**Calibration
SQL361B..**

In order to determine the disc position fully closed “0%” or fully open “100%”, calibration is recommended on initial commissioning of modulating type actuator.

Prerequisites

- Actuator is mounted on butterfly valve
- Rotate the actuator to the half-open position using the handwheel
- Housing cover is removed

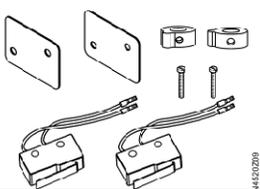

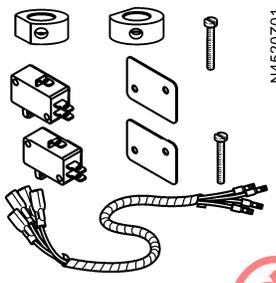

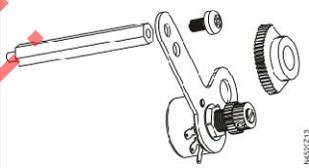

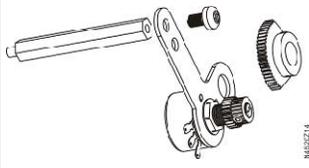

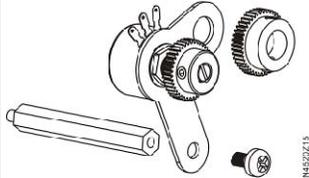

Step	To do	LED on PCB		Actuator action
1. Power supply	<ul style="list-style-type: none"> • Supply power to actuator terminal 1 and 2 • No control signal connected 		Lit	Actuator moves to “0%” (closed) disc position
2. Start calibration	<ul style="list-style-type: none"> • Press button S2 for 5 seconds 		Dark	Actuator remains at “0%” (closed) disc position
3. 0% (close) position	<ul style="list-style-type: none"> • Press button S6 • 0% (closed) value is stored 		Lit →Dark	When S6 is released actuator moves to 100% (open) disc position
	<ul style="list-style-type: none"> • Wait, actuator moves to open disc position 			
4. 100% (open) position	<ul style="list-style-type: none"> • Press button S7 • 100% (open) value is stored 		Lit	When S7 is released actuator moves to “0%” (closed) disc position
	<ul style="list-style-type: none"> • Wait, actuator moves to close disc position 			
5. Calibration completed	<ul style="list-style-type: none"> • Press button S6 • Calibration is now completed 		Flash	Actuator remains at “0%” (closed) disc position

Normal operation

Actuator follows control signal Y, the LED on PCB lights.

Engineering notes

Electrical installation

The actuators must be electrically connected in accordance with local regulations and with the connection diagrams.

Warning

Regulations and requirements to ensure the safety of people and property must be always observed.

Mounting notes

Mounting instructions

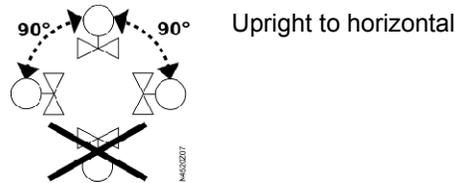

Product No.	Documentation No.
VKF42..	74 319 0808 0 (M4119)
SQL321B.. / SQL361B..	74 319 0809 0 (M4520)
ASC10..	74 319 0810 0 (M4520.1)
ASZ10..	74 319 0811 0 (M4520.2)

SQL321B.., SQL361B..

These actuators can be mounted directly on type VKF42.. butterfly valves. The butterfly valves have to be closed "0%" when the actuators are mounted onto the valves.

Orientation

The valve and actuator can be assembled on site. There is no need for special tools.

Commissioning notes

When commissioning the motorized butterfly valves, always check wiring and test the functions. This also applies to any additional components fitted, e.g. auxiliary switch.

Warning

To avoid pressure shocks on the butterfly valve, the VKF42.. must be driven to its fully open position either manually or via positioning signal prior to activating the pump(s).

The flow rate can be adjusted either by operating the electric actuators when necessary, or by operating the handwheel.

Operating notes

Manual operation mode

SQL321B25	Handwheel is engaged by pushing the handwheel in.
SQL321B50...B2650 SQL361B50...B2650	The handwheel is always engaged.

Reversing the direction of rotation

If the direction of rotation needs to be reversed, simply exchange the connections Y12 and Y14.

Setting the angle of rotation

The 0...90° angle of rotation for the mechanical limit switches is factory-set and cannot be changed.

The potential-free auxiliary switches are equipped with adjustable switching points.

Maintenance notes

Warning

The actuators and butterfly valves require no maintenance.

Before performing any service work on the valve or actuator:

- Switch off the pump and power supply
- Close the main shut-off valves in the pipe work
- Release pressure in the pipes and allow them to cool down completely

If necessary, disconnect electrical connections from terminals.

The valve must be re-commissioned only with the handwheel or the actuator correctly assembled.

Disposal

The products contain electrical and electronic components and must not be disposed of together with domestic waste. This applies in particular to the printed circuit board.

Legislation may demand special handling of certain components, or it may be sensible from an ecological point of view.

Observe all local and currently valid legislation.

Warranty

The engineering data specified in chapter "Equipment combinations" (page 2) are only guaranteed in connection with the Siemens butterfly valves listed.

Note

When using the actuators in connection with butterfly valves of other manufacture, correct functioning must be ensured by the user, and Siemens will assume no responsibility.
